

Continuation of Substance of Interview including description of the general nature of what was discussed: Examiner contacted applicants representative, Mr. Rowland, to clarify claims 26 and 27. Specifically, that the four partial images are captured at the four vertexes of the scan pattern and therefore do not form the scan pattern, rather the scan pattern results in the images. Examiner suggested an amendment to clarify that the scan pattern had four vertexes and that the enlarged image field is what is formed by generating and combining the four partial images. It was agreed an Examiners Amendment would be entered to make such a clarification in claims 26 and 27.
